

THE NEW YORK HOSPITAL-CORNELL MEDICAL CENTER

DEPARTMENT OF NEUROLOGY

February 15, 1979

Dr. Joshua Lederberg, President
The Rockefeller University
1230 York Ave.
New York, NY 10021

Dear Dr. Lederberg:

Again, many thanks for your time and I will be pursuing the matters we discussed. In the meantime, I thought I would let you know the dates of a couple of upcoming seminars that may be of particular interest to you. At 5:00 o'clock on Thursday, April 19, Dr. Victor Shashoua will be lecturing to us here at our Neurologic Study Unit on "Brain Glycoproteins and Memory Formation."

In addition, the Cognitive Neuroscience program and its workshops will be having at least three speakers coming up who will be lecturing on topics possibly of interest to you. On April 4 at 4:00 o'clock in Tower, Room 305, Dr. Floyd Bloom of the Salk Institute will be lecturing on "Neurotransmitters-- Too Few or Too Many."

And again in May our workshops will be looking at mechanisms of motor patterning and there are two distinguished neuroscientists who work at completely different levels. On Tuesday, May 8, at 4:00 o'clock Dr. Emilio Bizzi of M.I.T. will be lecturing. And on Wednesday at 4:00 o'clock Dr. Stephen Hillyard of U.C., San Diego will be lecturing on "Attention and Orienting: Electrophysiological Approaches in Man." Dr. Bizzi does elegant single unit recordings during motor tasks in the awake monkey, whereas Dr. Hillyard works on event related potentials in human studies. Their interests for you will be that they do represent the best of a particular kind of approach to neuroscience problems.

Again, many thanks for your support and I will be back to you as soon as I have some organized thoughts on those other issues.

Cordially,

↓ *MS* 472-8296
Michael S. Gazzaniga, Ph.D.
Director, Division of Cognitive Neuroscience
